Farsighted Vision: Incorporating Information Literacy into Health Sciences Curriculum

EXKPH 370: Writing for Exercise Science

Course Description: A six-week writing course for the Health Sciences. The course is designed for students who have no previous experience in writing for exercise science. The course aims to teach students how to write effectively and efficiently. Students will learn how to write for different audiences and purposes, including research papers, case studies, and literature reviews. The course will cover topics such as research design, data collection, and analysis. Students will also learn how to effectively communicate their research findings to a non-expert audience.

HN&F 610: Nutrition and Fitness

Course Description: This course is designed for students who are interested in nutrition and fitness. The course covers topics such as nutrition, fitness, and exercise. Students will learn about the relationship between nutrition and health, as well as the importance of regular exercise. The course will also cover topics such as weight management, fitness assessment, and nutrition for athletes. Students will have the opportunity to apply their knowledge through practical exercises and projects.

Nursing 715: Scientific Underpinnings for Practice

Course Description: This course is designed for nursing students and covers the scientific underpinnings of nursing practice. The course aims to equip students with the knowledge and skills necessary to practice nursing responsibly and effectively. The course covers topics such as research methods, evidence-based practice, and the role of the nurse in evidence-based practice. Students will have the opportunity to apply their knowledge through practical exercises and projects.
